

Green Energy

Reduce CO2 emissions, maintenance and fuel costs

Power your fleet with solar panels and turn sustainability into profitability

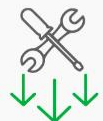

Key Benefits

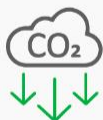

4-7% Fuel reduction > Solar solutions generate clean energy, reducing dependence on traditional fuels and boosting self-sufficiency

Extended lifetime > Installing solar solutions on your fleet extends battery and alternator life by ensuring controlled, steady charging and preventing under- and overcharging

Reduced breakdowns > Solar panels and advanced battery management, significantly reduce the likelihood of an empty starter battery

Reduced idling > Solar panels reduce the need to idle and fossil fuels as the battery is automatically charged by solar energy

Improved transparency and reporting > The solar solution includes fleet software that enables real-time data, analyses and reporting leading to improved fleet management.
